

RADHIKA GARG

radhikagarg933@gmail.com | +91-8791271189 | Shamli, Uttar Pradesh 247776

I am a highly motivated third-year B.Tech student specializing in Artificial intelligence & Data Science. Passionate about AI, machine learning, and data-driven solutions. I am eager to apply my skills in programming, problem-solving and project coordination to real-world challenges.

EDUCATION

Graphic Era Deemed To Be University | Dehradun
B.Tech in Computer Science (AI & DS)
GPA: 8.6 (up to 5th Sem)

2023-2027

Silver Bells Public School | Shamli
Secondary
Percentage: 93.4%

2009-2023

TECHNICAL SKILLS

- Languages: C / C++, Python, Java, JavaScript
- Tools and Frameworks: Tableau, Scikit-learn, NumPy, Pandas
- Concepts: Data Structures & Algorithms, Object-Oriented Programming, Machine Learning Basics
- Databases: MySQL, MongoDB
- Operating Systems: Windows, Linux

PROJECTS

PhishBoost – Phishing URL Detection System

- Built a phishing detection system using **XGBoost, Random Forest, and Decision Tree** to classify malicious and legitimate URLs. Achieved approximately 92% accuracy on the trained dataset.
- Developed using **Python** as the primary programming language. Utilized libraries such as **Scikit-learn** for machine learning and **Pandas, NumPy** for data processing and numerical computations.
- Implemented algorithms include **XGBoost, Random Forest, and Decision Tree** for classification. Development and version control were carried out using VS Code and Git.

Time Table Management System

- Developed a system to schedule classes, events, teachers, and students while avoiding time conflicts. Implemented database management for storing schedules, user details, and course information.
- System implemented using **Python** as the primary programming language, with **Flask/Django** for backend development and **HTML, CSS, JavaScript** for the frontend.
- MySQL** is used as the relational database for efficient storage and retrieval of schedules, user, and event data. Core concepts from **DBMS and Operating Systems** are applied to ensure conflict-free scheduling and resource management.

Smart Job Portal & Resume Analyzer

- Developed a smart job portal that matches job descriptions with user profiles to determine job suitability and automatically generates a resume for eligible candidates.
- The project features a frontend built with **HTML, CSS, JavaScript, and Bootstrap**, while the backend is implemented using **Python (Flask/Django)**. **MySQL** serves as the database for structured data management.
- Machine learning components are developed in Python using **Scikit-learn** and NLP libraries such as **spaCy**.

CERTIFICATIONS

- AWS Skill Builder Certification – Technical Essentials, Cloud Practitioner
- Tata – GenAI Powered Data Analytics Job Simulation
- Google – Cloud Computing Foundations: Data, ML, AI in Google Cloud
